

This folder contains the shapefiles for the June, 2017 West Africa FEWS NET Food Security Outlook. The classification scale used is the [Integrated Phase Classification \(IPC\) V2.0 scale](#). The folder includes three shapefiles, representing the three periods of analysis:

|               |  |
|---------------|--|
| WA_201706_CS  | Current food security outcomes for June 2017                       |
| WA_201706_ML1 | Most likely food security outcomes for June 2017 – September 2017  |
| WA_201706_ML2 | Most likely food security outcomes for October 2017 – January 2018 |

Within the shapefiles, the CS/ML1/ML2 fields contain the IPC area phase classification for the outlook period. The Humanitarian Assistance column (HA0, HA1, or HA2) indicate if humanitarian assistance is helping to lower the phase classification. If the HA column = 1, then the phase classification would likely be at least one phase worse without current or programmed humanitarian assistance. In FEWS NET and IPC maps, this is represented by an exclamation mark (!).

The IPC\_Legend.lyr file is provided for reference. It contains the official IPC color scheme. An additional layer file with the IPC standard symbology (!) for humanitarian assistance is also provided.
